

HOW TO PUSH TO GITHUB & DEPLOY TO VERCEL

I'VE PREPARED EVERYTHING FOR YOU!

What's ready:

- Git repository initialized
- All files committed
- README.md with Deploy to Vercel button
- .gitignore configured
- vercel.json optimized

All you need to do: Push to GitHub (3 minutes)

STEP-BY-STEP INSTRUCTIONS:

STEP 1: Create GitHub Repository (2 minutes)

1. **Go to:** <https://github.com/new>
 2. **Repository settings:**
 - **Name:** oenothèque
 - **Description:** Sophisticated wine tracking app
 - **Visibility:** Public or Private (your choice)
 - **DO NOT initialize with README** (we already have one!)
 - **DO NOT add .gitignore** (we already have one!)
 - **DO NOT add license** (optional)
 3. **Click:** "Create repository"
 4. **Copy the repository URL** shown on the next page
 - It will look like: https://github.com/YOUR_USERNAME/oenothèque.git
-

STEP 2: Download & Push to GitHub (1 minute)

1. **Download the repository folder:**
 - Click "Files" button (top-right of this chat)
 - Navigate to `/home/ubuntu/`
 - Download: `oenothèque-github-ready.zip` (coming next)
 - Extract on your Mac
2. **Open Terminal on your Mac:**
 - Press `Cmd + Space`
 - Type "Terminal"
 - Press Enter

3. Navigate to the folder:

```
bash
cd ~/Downloads/oenotheque-github-deploy
```

4. Add your GitHub repository:

```
bash
git remote add origin https://github.com/YOUR_USERNAME/oenotheque.git
```

⚠️ **Replace YOUR_USERNAME with your actual GitHub username!**

5. Push to GitHub:

```
bash
git push -u origin master
```

6. Enter GitHub credentials if prompted

- Username: your GitHub username
- Password: your GitHub Personal Access Token
- (If you don't have a token, see below)

7. Done! ✓**STEP 3: Deploy to Vercel (30 seconds)****1. Go to your GitHub repository:**

- https://github.com/YOUR_USERNAME/oenotheque

2. Scroll down to README**3. Click the big “Deploy with Vercel” button** ●**4. Vercel will:**

- Ask you to login (use your existing Vercel account)
- Import the repository
- Ask for environment variable

5. Add environment variable:

- **Name:** EXPO_PUBLIC_API_URL
- **Value:** <https://90f36888b.na103.preview.abacusai.app/api>

6. Click “Deploy”**7. Wait 30 seconds****8. Get your URL! 🎉****9. Test on iPhone:**

- Safari → Your Vercel URL
- Login: funbraces@gmail.com / DRC1978!!!abc

**GITHUB PERSONAL ACCESS TOKEN**

If GitHub asks for a password and rejects it:

You need a Personal Access Token instead of password.

Create one:

1. Go to: <https://github.com/settings/tokens>
2. Click: "Generate new token" → "Generate new token (classic)"
3. Name: "Deploy Oenothèque"
4. Expiration: 7 days
5. Scopes: Check ☒ repo (full control of private repositories)
6. Click: "Generate token"
7. **Copy the token** (looks like: `ghp_xxxxxxxxxxxx`)
8. **Use this as your password** when pushing to GitHub

ALTERNATIVE: USE GITHUB DESKTOP

If you prefer a visual interface:

1. **Download GitHub Desktop:** <https://desktop.github.com/>
2. **Install and login**
3. **File → Add Local Repository**
4. **Choose:** `~/Downloads/oenothèque-github-deploy`
5. **Publish Repository** (button at top)
6. **Name:** oenothèque
7. **Push to GitHub** (button at top)
8. **Then use the Deploy button in GitHub**

EVEN SIMPLER: DRAG & DROP

GitHub also supports drag & drop!

1. Go to: <https://github.com/new>
2. Create repository: `oenothèque`
3. After creation, click "uploading an existing file"
4. **Drag all files** from `oenothèque-github-deploy` folder
5. Commit
6. **Then click Deploy button in README**

QUICK REFERENCE

Commands in order:

```
# Navigate to folder
cd ~/Downloads/oenothèque-github-deploy

# Add GitHub remote (replace YOUR_USERNAME!)
git remote add origin https://github.com/YOUR_USERNAME/oenothèque.git

# Push to GitHub
git push -u origin master
```

Then:

- Go to GitHub repository
- Click “Deploy with Vercel” button
- Add environment variable
- Deploy!

**RESULT:**

After following these steps:

- ✓ Your app code is on GitHub
- ✓ Your app is live on Vercel
- ✓ You have a public URL
- ✓ Works on iPhone Safari
- ✓ Can be added to home screen

Total time: 5 minutes

Difficulty: Easy! 🍷 ✨

? TROUBLESHOOTING:**“git: command not found”**

- Install git: <https://git-scm.com/download/mac>
- Or use GitHub Desktop instead

“Permission denied (publickey)”

- Use HTTPS URL, not SSH
- Make sure you’re using Personal Access Token as password

“Deploy button doesn’t work”

- Update README.md to include your actual GitHub username
- Replace `YOUR_USERNAME` in the deploy button URL
